<b>Topic to be presented: Green Future and Sharing Civilization between China and Latin America: A Tale of Convergence and Divergence</b>
<p><b>Abstract</b></p> <p>The 21st century has brought renewed urgency to the intertwined challenges of environmental sustainability and global cooperation. Among the regions poised to redefine the contours of international collaboration are China and Latin America.</p> <p>Within this broad geopolitical frame, the China-Brazil relationship stands out, offering a revealing prism through which to explore two simultaneous dynamics: the potential for convergence in the green transition and the persistence of divergence in the broader domain of civilizational models.</p> <p>While Brazil and China share overlapping interests in decarbonizing their economies, their approaches to political organization, cultural identity, and historical self-perception chart divergent civilizational paths.</p> <p><b>Keywords:</b> Green transition; Convergent economic interests, Divergent cultural roots; Contrasting Governance models.</p>
